

**FUNCTIONAL
PLANT FOOD™**

Oxy Booster™

5-0-0

PRODUCT INFORMATION

When **Oxy Booster** is applied to soil, besides supplying nitrogen, it releases oxygen directly to the roots. Increased oxygen in the root zone may help in promoting a healthier root system and preventing problems that may occur from waterlogged or oxygen deprived soils. Foliar application of **Oxy Booster** supplies nitrogen and releases oxygen upon contacting the foliage.

DIRECTIONS FOR USE

Foliar Application (Field Crops, Greenhouse and other similar sites): Mix 2 to 4 qts. of **Oxy Booster** per 100 gal. of water (2-4 L/400 L) and spray on foliage until wet (typically 30-100 gal./acre). Complete coverage is essential. Repeat application after 7 days if needed.

Soil Application: **Oxy Booster** can be applied by the following irrigation systems only: drip, end tow, lateral move, hand move, and center pivot. **Oxy Booster** can also be applied by banding, broadcast, drench or preplant dip.

Drip, end tow, lateral move, hand move and center pivot: Apply 2-4 qts. of **Oxy Booster** with 500-1000 gal. of water per acre (2-4 L/2000-4000 L). Or, inject **Oxy Booster** at a dilution ratio of 1:500-1:1000.

Drench:

Prior to planting: Apply 1 1/4 fl. oz. of **Oxy Booster** per gallon (10mL/L) of clean water. Apply to soil to point of saturation. Wait fifteen minutes before planting or watering.

Established plants: Apply 1/2- 1 1/4 fl. oz. per gal. of water (5-10mL/L) and apply 6 gallons per 1,000 sq. ft. (20 L/100 m²). Repeat at 5-7 day intervals.

Pre-Plant Dip: Mix 2 qts. of **Oxy Booster** per 50 gal. of water. Dip plants or cuttings and allow to drain. Do not rinse.

Banding and Broadcast: Apply 2-4 qts. of **Oxy Booster** per 100 gallons of water (2-4 L/400 L). Apply 50-150 gallons of solution per acre (500-1500L/Ha).
